Wedges

A-PLUS FRAMING FASTENERS

The special steel "A+ - A-PLUS Framing Fasteners" wedges have been designed to improve the quality of the mitre joint. Its special design allows to get perfectly stable joints. The very high quality steel along with the special silicon (lubricant effect for a smoother penetration) we've selected in many years of experience, make our wedges the best choice in terms of quality available on the market.

They are manufactured in two main types:

- **Type 11.0** - for A-Plus Assembly machines and Minigraf
- **Type 10.3** - Universal

The "A+" wedges, due to their specific design ensures only perfect joins!

PILM DIVISION WEDGES

The assembly machines of the **PILM Division** use "PILM" wedges. The characteristic shape of the "PILM" wedge allows the angle to be closed by placing the two laths in traction, thus guaranteeing a high quality joint. The wedges are normally produced with single or double sharpening ideal, the latter, to be superimposed and for the junction of hardwoods.

The "PILM" wedges are produced in ALS steel and in Stainless steel, depending on the use of the staples themselves:

- **ALS steel** with standard mechanical resistance for staples that can be used with soft and medium woods;
- **Stainless steel** for special applications where the presence of rust must be avoided

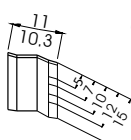

"PILM" wedges are packed in boxes and in a standard multiple carton of 20 boxes (MULTIPACK) which improves safety in transport and handling.
