Tendy 150

Pneumatic stretching canvas machine

The assembly of the canvases by means of the TENDY stretching machine, allows to simplify and improve the work of stretching the canvas onto the wooden frame: it gives a uniform tensioning of the canvas and a perfect centring of the image.

The Tendy is a fully pneumatic device, both for the fabric presser and for the tensioner, which use independent and adjustable working pressures.

The machine works vertically with the positioning of the fabric on the printed side, which is particularly useful for precise centering on the frame.

The TENDY is equipped with both mechanical and pneumatic devices, designed to prevent the fingers from being crushed during the work cycle.

The Tendy 150 has a maximum capacity of 1500 x 1500 mm.
